ZP High School – 8.7GPA

SKILLS

Programming Skills

- Java
- JavaScript Framework
- Bootstrap
- Git

Database Management

- MySql

Libraries

- React Js

CERTIFICATIONS

Database Programming with SQL – Oracle

JavaScript for Beginners - Simplilearn

ReactJS for Beginners - Simplilearn

Programming For Everybody - Coursera

Java Basic - Hackerrank

EXPERIENCE

UI/UX Design :

- Worked as a UI/UX Designer at Thiran360AI, where you enhanced user experience through design techniques and created interactive interfaces with tools like Figma, Adobe XD, and Adobe Photoshop.
- Contributed to live projects with a team, refining skills in collaborative design environments, and improving the overall aesthetic and functional aspects of applications.

React.js & Front-End Development:

- Developed dynamic, responsive applications with React.js, focusing on creating user-friendly interfaces and integrating real-time functionalities.
- Built diverse personal projects, including a Quiz Application, Color Generator, Star Rating Component, and a Weather App, emphasizing interactivity and smooth UI/UX.
- Used API integration with Axios in a Quick News project to fetch and display real-time data, navigating API challenges to develop a functional, news-fetching platform.
- Experienced in designing responsive layouts using CSS and Bootstrap, adapting to various screen sizes for improved accessibility and user engagement.

Backend Development & Database Management:

- Proficient in Java and MySQL, with experience in handling JDBC for backend development, facilitating secure data management and connectivity.
- Gained practical knowledge in MySQL, using it for database handling in multiple projects such as an Employee Management System, ensuring efficient data retrieval and storage.

Version Control with Git:

- Familiar with Git version control, maintaining codebases across projects, and collaborating on projects with a team.
- Acquired knowledge on using .gitignore to manage sensitive data within repositories, while keeping code organized and secure.

Training :

- Delivered hands-on workshops covering Java core concepts, OOP principles, and JDBC since 2022.
- Designed comprehensive training materials, focusing on practical applications and real-world projects to reinforce learning.
- Provided personalized feedback, enabling students to improve programming and problem-solving skills.

PROJECTS :

Project: Employee Management System

Role: Full-Stack Developer

Technologies: HTML, CSS, JavaScript, MySQL

- **Efficient Employee Data Management:** Developed a system to streamline employee data management, enabling administrators to easily add, update, and remove employee details in a structured, user-friendly interface.
- **Secure Database Integration:** Integrated a MySQL backend to store employee information securely, implementing data validation and authorization checks to maintain data integrity and security.
- **User-Friendly UI Design:** Created an intuitive UI with clear layouts and navigation, making it easy for users to interact with employee data and retrieve information quickly.
- **Responsive Design for Accessibility:** Ensured that the application is responsive, providing a seamless experience across devices, including desktop, tablet, and mobile.
- **Performance Optimization:** Implemented efficient data handling and page loading techniques to deliver quick responses, making the application suitable for daily business operations.

Project: Quick News Application**Role: Front-End Developer****Technologies: React, React Bootstrap, Axios**

- Real-Time News Updates with API Integration: Built a news application that fetches real-time news articles from a third-party API, allowing users to stay updated on current events.
- Category and Keyword Search: Implemented features for users to search news articles by category and keyword, providing a tailored news feed based on user interests.
- Axios Integration for Dynamic Content: Used Axios to integrate the news API, enabling seamless, real-time updates of news content as users navigate between categories and sections.
- Smooth User Navigation: Created an intuitive navigation flow, making it easy for users to explore multiple news sections and access articles quickly.
- Performance and Accessibility: Focused on performance optimization for fast loading and accessibility compliance to ensure a positive experience for all users.

Project: Weather Application**Role: Front-End Developer****Technologies: HTML, CSS, JavaScript, Axios**

- Real-Time Weather Information Display: Developed a web application that fetches real-time weather data based on user location, allowing users to check current weather conditions instantly.
- Dynamic Weather Visuals and Icons: Designed a visually engaging UI, incorporating weather icons and dynamic visuals that change according to weather conditions.
- Location-Based Forecasting: Integrated a geolocation feature that provides weather information specific to the user's location, with options to search for other cities.
- Responsive, Mobile-Friendly Layout: Ensured the application's layout is responsive, adapting smoothly to various screen sizes for optimal performance on desktops, tablets, and smartphones.
- Efficient API Integration: Utilized an external weather API to retrieve live data and display temperature, humidity, wind speed, and other relevant weather metrics.
